

The Standard Family Physician: A Practical International Encyclopedia of Medicine and Hygiene Especially Prepared for the Household (Classic Reprint)

Excerpt from The Standard Family Physician: A Practical International Encyclopedia of Medicine and Hygiene Especially Prepared for the Household

The general utility of this work, The Standard Family Physician, and the value of the guidance it affords, within a well-defined area, in plain and clear language, can scarcely be over-estimated. Some time ago Lord Derby, with great perspicacity, called attention to three lines of defence against disease - the public, the professional, and the private - and declared that, from every point of view, the last of these is, and must always be, the most salient and important. The first line of defence indicated by Lord Derby has been vastly strengthened of late years. Central and Local Sanitary Authorities have come into existence; specially qualified Medical Officers of Health have been appointed in almost every district of the country; legislation more or less judicious, directed against several conditions productive of disease, has been undertaken on the large scale, and Governments have begun to show an intelligent appreciation of hygiene as the basis of good citizenship. Lord Derby's second line of defence, the professional one, has also been fortified, for medical men are now better educated and equipped than they have ever been before, and are as eager as ever, with unselfish devotion, to diminish the prevalence of these states of ill-health on which their living depends. But it is in Lord Derby's third line of defence - the private one, which ought to be the strongest - that weakness is still manifested, and in connection with which the need of support and reconstruction is urgent. The enormous sale of empirical remedies, and their indiscriminate employment, the success that attends a host of impudent charlatans, the vogue of every novel and fashionable healing craze, and the organized endeavours to cheapen medical advice, all

betoken a dense and widespread ignorance of the very elements of medical science, and the ascendancy of the mischievous credulity to which that ignorance gives rise.
