

The Practical Guide to Connecting a Dumb TV / Amazon Fire TV Stick to a Network & Internet channel Server

Back Cover Publisher Description This eBook addresses the subject, with respect to the Amazon Fire TV Stick, as an international device and as such this eBook is not country specific, addressing any geographical differences where they are significant. Note: Should a potential purchaser merely wish to make use of the more limited access to local network and on-line media content provided by the Amazon Fire TV Stick to stream video & movies, using the basic features of the Amazon Fire TV Stick and associated software, then this eBook is not a requirement and such potential purchasers are advised that this eBook will be of no interest to them and should not attempt to purchase it. The functionality of a Smarter TV or Dumb TV / Amazon Fire TV Stick Combination, used to emulate the functionality of a Smart TV through the use of Amazon Fire TV Stick hardware and software combination, may be fully utilised by giving it access to a suitable DLNA/uPnP Compliant Network & Internet channel Digital Media Server Application running on a Windows/Linux/Apple Mac OSX based Desktop or Laptop computer. Such an application gives the Smarter TV access to home network media content and a large number Internet channels which are not provided by the Amazon Fire TV Stick itself. A Smarter TV can be the platform for Cord-Cutting or Cord-Fraying, the complete or partial disconnection of paid Cable or Satellite TV Services. Unlike other methods which rely on the Graphical User Interface (GUI) of an device external to the Amazon Fire TV Stick used to Push content to the Dumb TV / Amazon Fire TV Stick Combination, the method described here more closely emulates the behaviour of a typical Smart TV by seamlessly integrating an installed Graphical User Interface (GUI) along side the Amazon Fire TV Stick menu system on the screen

of the Amazon Fire TV Stick, in use, to Pull digital media content to the screen of the Dumb TV in use. Although a Smart Phone/Tablet is not required to use the techniques described within this eBook, the reader may choose to take advantage of one as a Touch Screen Graphical replacement for the more usual Blue-tooth non voice-enabled remote control usually supplied with Amazon Fire TV Sticks. This provides the missing voice enabled search feature and allows selection of both local Network and, the added, internet channels using a Smart Phone or Tablet. No advanced technical aspects of the underlying networking technology are discussed. No prior knowledge or advanced technical skills are required to achieve the final result. The reader is not required to understand, and will not be presented with, any technical details of the networking techniques used. This eBook is highly graphical in nature in order to minimise the amount of text the reader is presented with, this is reflected in the high page count and larger than usual file size of the eBook, it moves very quickly after a little reading into hands-on practical demonstrations. Concise text and illustrated full-colour descriptions are used to introduce the basic principles of media file streaming. Step-by-step full-colour screenshots demonstrate the Downloading, Installing and Configuring the PLEX Media Server (PMS) Application to a Desktop or Laptop. Downloading and Installing, The PLEX Digital Media Server (PMS) client app, Plex to the Amazon Fire TV Stick and an Android based Smart Phone / Tablet. The Defining of the Media Server Folder / File Structure to be used by the PLEX Media Server (PMS) Application. Installing the Unsupported AppStore Plug-in, Installing Unsupported Internet channel apps using the AppStore and Flinging digital media content from Unsupported Internet channel apps.
